### **Task Tools & Abrasives Launches Three New Premium Quality Power Tool Accessories**

Delta, BC, July 18, 2008 – Task Tools & Abrasives launches three new power tool accessories for the North American hardware market: a complete range of professional duty screwdriver bits & accessories, a thin kerf carbide blade for pressure treated lumber, and a line of high quality scroll saw blades. Craig Caplan, President of Task Tools said, “We’ve taken these products to the next level in terms of ease of use and ease of purchase. They are a cut above what’s currently available in the market.” All three product lines are supported by Task’s 100% satisfaction guarantee and are available in small to medium sized hardware and lumber retailers.

#### **Professional Duty Screwdriver Bits & Accessories**

Task Tools has a new space efficient cabinet to showcase the 44 different types of bits and driving accessories such as exchangers and adapters. This one-stop solution makes it easy for contractors to get what they need by seeing a comprehensive selection of all common bit types and sizes including color coded genuine Robertson® bits. All bits are made with contractor grade S2 steel.

#### **Thin Kerf Carbide Saw Blade Designed for Pressure Treated Lumber**

Task has designed this tool specifically for cutting pressure treated lumber quickly, precisely and safely. The dynamically balanced blade features a tempered steel chassis, genuine C3 carbide teeth, and a urethane coating. The urethane coating resists the resin buildup commonly associated with cutting pressure treated lumber, enabling the blade to run cooler, cut cleaner, and last longer. This product also

features an anti-kickback design that limits the amount of material the teeth can remove with each pass, greatly enhancing safety. Available for 7-1/4" circular saws, it's perfect for decking and fencing projects.

### **Scroll Saw Blades Perfect for Fine Finishing**

Task's new scroll saw blades are designed for finishing carpentry and fine detail work. This varied range of blades can be used when cutting hardwood, softwood, plastics, plywood, MDF, veneers, particle board, aluminum and non-ferrous metals. Milled and heat treated to optimum hardness and flexibility, Task scroll saw blades come in 10, 15, 11.5, 12.5, and 20 TPI with a choice of pin ends or plain ends and with skip, reverse or spiral teeth configurations. These new blades are suitable for use with popular scroll saw brands and come in a variety of packages to fit individual needs.

### **About Task Tools & Abrasives**

Founded in 1968, Task Tools & Abrasives is a family owned and operated business that provides quality products, exceptional customer service, and innovative merchandising solutions to hardware retail partners across North America. The company has two brands, Task® and Tuf-E-Nuf®, which sell in four product categories - power tool accessories, hand tools, abrasives, and leather goods and accessories. With over 150 employees, a leather manufacturing facility, and three warehousing and distribution offices across Canada and the US, Task Tools & Abrasives offers over 4,000 products to over 4,000 retail partners.
